

PLAYGROUND | EXECUTIVE HEALTH SUMMARY

September 28, 2026 | 11:22 AM ET

CURRENT HEALTH

74 devices: 3 online, 14 offline (18.9%), and 57 marked unavailable by the API. 39 active incidents include 7 critical alerts. No open tickets are shown.

A measured uptime percentage is not available from xyte-cli. These are current states, not 30-day uptime.

LOCATIONS WITH THE MOST ISSUES

Cork and Taipei

Teams rooms are flagged offline with disconnected cameras. Cork also has a critical Edge-offline alert.

New-Jersey / Dolfinarium

Three devices are offline, including the Bravia display and two DSP devices.

Taipei / Unsorted

16 active alerts sit on C930e; most are user-created or test-labelled, so this count needs review.

BIGGEST RISKS RIGHT NOW

- Critical Edge-offline alerts also affect Bangkok and Tel-Aviv, alongside Cork.
- Cork's LS445_Media signage player is offline and has a high-priority health error.

30-DAY DIRECTION

- 30 new incidents were created in the latest 30 days, versus 19 in the prior 30 days (up 58%).
- 22 of the 30 were in Cork. The latest seven days had 17 new incidents, versus 11 in the preceding seven days.

THREE NEXT ACTIONS

1. Restore the Teams room and Edge connections in Cork, Taipei, Bangkok, and Tel-Aviv; verify cameras after recovery.
2. Resolve the three offline Dolfinarium devices and Cork signage player, then confirm the rooms work for users.
3. Investigate Cork's recurring alerts, route live faults into a tracked queue, and clear test-labelled Taipei alerts from the operational view.
